

# Brush Type Chain and Conveyor Lubrication Systems

Brush type chain lubrication systems can provide a simple, inexpensive, reliable, maintenance friendly way of applying chain oils and lubricants.

Brush type systems are suitable for chains of small design and low speeds.

A pump delivers the lubricant either directly or via a metering device to the brushes. The brushes apply the lubricant evenly to the chain.

The largest relative movement of all chains occurs between the link plate and the chain stud and the stud and the bushing where considerable force is transmitted. Insufficient lubrication of this area will cause premature wear and chain failure. The consequence is expensive production downtime.

Automated chain lubrication systems apply precisely metered quantities of lubricant to the chain, where it is needed.

## Benefits:

- **Prolonged chain life.**
- **Reduced energy consumption.**
- **Quieter operation.**
- **Cooling for fast running Chains**

**Several system configurations are available.  
Contact us with your application.**
