

## Manage Your Fluids

### FCS Fluid Control System

The FCS gives management control over the dispensing and consumption of costly lubricants, coolants and other like fluids.

PIN number access at two levels (administrative and user) ensure that only those who are authorized have access to the fluids and the configuration of the system. A record of every dispense transaction ensures that each fluid service is billed out. Tank level monitoring serves to protect against "we are out of oil" events. When connected to a PC, comprehensive reports are available for management review and analysis.

**Lubrication and Fluid Handling Solutions**

**User friendly Keypads** (Operator Control Units) can be located in parts or the service shop. Multiple keypads can be installed and located to provide convenient access.

PIN number controlled access at two levels – administrative and user.

Optional built in ticket printer provides a print out of each dispense transaction that can be attached to the work order for billing and records keeping purposes.

The FCS can be connected and controlled from a PC. Dispense transactions can be tracked and recorded. Data containing information on the date, technician, work order, fluid dispensed, quantity dispensed oil level in tank, etc., can be downloaded

## FCS Features and Capabilities

User Friendly Keypad for system access, order entry and control.

Simultaneous Dispensing – dispense from multiple stations at the same time.

Inventory Control – records on usage for inventory management, re-order dates, etc.

Tank Low Level Alerts – two levels, first level warning the second level can be used to shut equipment down.

### Capabilities:

Up to 1,000 approved operators

Up to 4,000 dispense transactions can be stored in one Keypad (Operator Control Unit)

Up to 99 Keypads can be connected together

Up to 12 dispense points from one Keypad

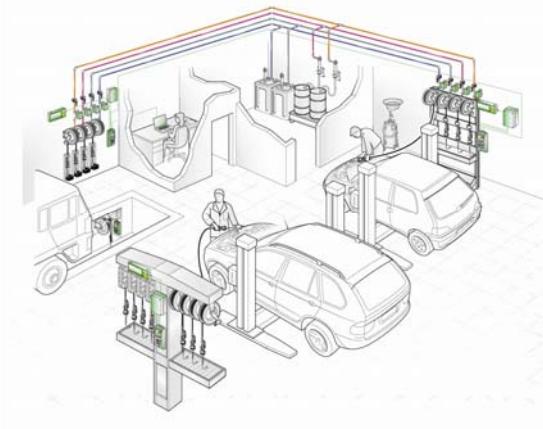

6 simultaneous dispenses from one Keypad

Up to 1188 total dispense point capability

Up to 12 tanks monitored by one Keypad

Up to 50 tanks monitored when connected to a PC

Pre-set or Non-Pre-set dispenses can be performed – all dispenses are recorded.
