Paper Bed Filter

Gravity Flow Filtration Unit

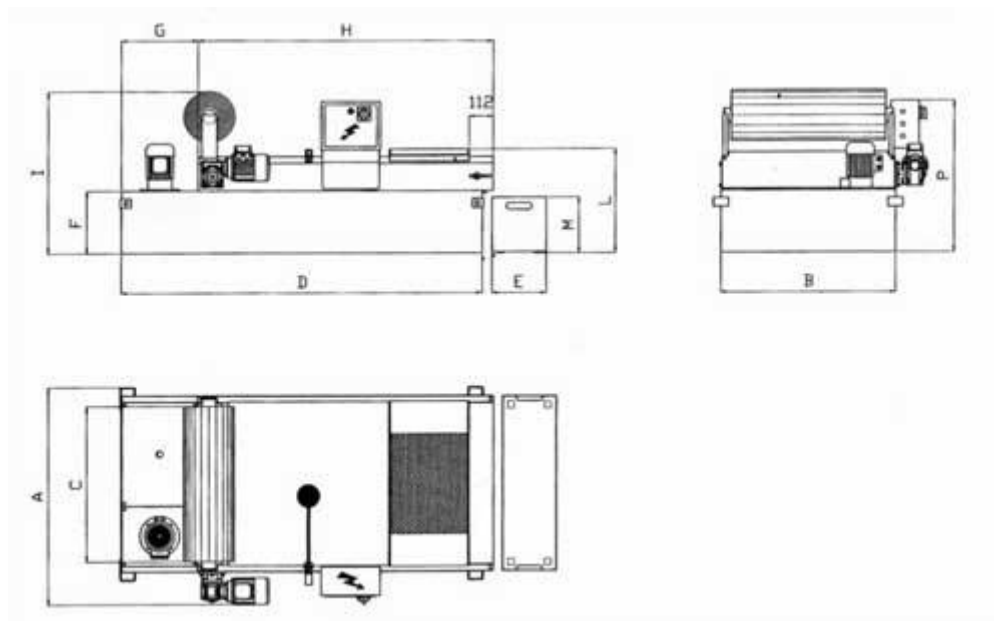

The paper bed filter removes contaminants from liquids such as water soluble fluids, detergent water, cutting oils, grinding fluids, and more!

The polluting particles can be metallic or non metallic. The filtration degree is determined by the choice of the filter cloth. All purifiers can also be produced in stainless steel for corrosive liquids, pure water and the food industry.

A complete system consists of paper bed conveyor, clean holding tank, swarf box to hold spent paper, clean fluid return pump, and 460v / 3PH / 60Hz electrical.
