

## Designed and Installed Projects

### Truck Assembly Plant – engine coolant proportioning system

Truck assembly plant coolant proportioning & blending system. Concentrate coolant is pumped from an outside tank to a Pro/Mark PVF-7A proportioner. The concentrate is blended through the proportioner and transferred into an agitated blending tank. From the blending tank, the mixed coolant is pumped out to fill stations on the production line. Project included system design, supply and installation of control, pump station, processor controlled proportioner, turn key installation.
